

VACCINE PROVIDER PLAYBOOK

POINT OF CARE

Indiana Department of Health

May 2021

Introduction

The Indiana Department of Health has developed a process for primary care providers in Indiana to order vaccine directly for in office patient administration. The playbook will guide interested participants through the process of becoming an enrolled provider, ordering vaccine, receiving and storing vaccine, and administering vaccine to their patients. Physicians who have additional questions while reviewing the information in this document are encouraged to reach out to the IDOH point of contact identified in the table below:

Point of Contact Information		
	Name	Email
Primary	Katie Lamoreaux	KLamoreaux@isdh.IN.gov
Secondary	Gina Bindley	GBindley@isdh.in.gov

Vaccine Provider Process

Step 1: Provider Enrollment

Before receiving COVID-19 vaccine, providers must enroll to receive and administer COVID-19 vaccine. Provider enrollment is mandated by the federal government. IDOH has developed an electronic COVID-19 vaccination provider agreement form. This form can be completed at <https://eportal.isdh.in.gov/CovidProviderEnrollment/>. The linked portal also collects information required by the Centers for Disease Control and Prevention (CDC).

Step 2: Vaccine Scheduling and Reporting

Providers are expected to schedule and report COVID-19 vaccine administration through their own EMR system. If your EMR does not have a bi-directional interface with the Children and Hoosier Immunizations Registry Program (CHIRP) you must contact your primary point of contact at IDOH (identified in the table above) to ensure your data is being correctly recorded. Due to regulations surrounding the COVID-19 vaccine, vaccine administration must be entered in CHIRP regardless of age.

Providers should not order vaccine through the Indiana Immunization Information System (IIS). Ordering will be done through REDCap as explained in the next section of this document.

Step 3: Vaccine Ordering

Vaccine ordering will occur weekly through a REDCap survey that should only be filled out by providers who have enrolled as a provider through the portal. The survey will require providers to input their PIN,

contact information and how much vaccine they would be requesting for the following week. Providers will have until 9 a.m. EDT Wednesday to submit the survey. IDOH will then order the requested vaccine through VOMS. Providers should expect to receive their vaccine no later than noon EDT on the following Wednesday. Ancillary supplies (including diluent in the case of the Pfizer vaccine) will be delivered with the vaccine shipment. See below for a sample cadence of vaccine requests and delivery:

Vaccine Ordering Cadence						
Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Vaccine Provider Inventory Request Survey Open		Survey due at 9AM		Vaccine Provider Inventory Request Survey Open		
Vaccine Provider Inventory Request Survey Open		Survey due at 9AM				
		Vaccine Shipment Arrival by 12 PM				

Providers will, by default, receive Pfizer vaccine. The minimum order is 60 doses (10 vials=6 doses per vial), and any additional requested doses will be in increments of 60. Concerns about wastage or inability to utilize 6 doses is explained in further sections. Requests for other types of vaccines should be discussed with your primary contact.

The weekly REDcap survey link to order Pfizer vaccine is located below:

<https://redcap.isdh.in.gov/surveys/?s=CJCYTKF84Y>

This link will not change and must be filled out by 9 a.m. EDT on Wednesday every week in order to receive vaccine by the following Wednesday. If providers do not wish to request additional vaccine, they do not need to fill out the survey.

Step 4: Second Dose Scheduling

Providers must schedule patients for second doses at their facility when administering the first dose of either the Pfizer or Moderna vaccines. The table below describes the CDC recommended dose windows for the COVID-19 vaccines. It is highly recommended that second doses occur within these windows for maximum efficacy.

Second Dose Windows		
Pfizer	Moderna	Johnson & Johnson (Janssen)
21 – 42 Days	28 – 42 Days	single-dose only

Additional Information

Resources

Ancillary supplies will be included with the vaccine. You will receive a complementary amount that matches amount of vaccine that you are requesting. The ancillary supplies will be shipped directly to you. Provided ancillary supplies will not include gloves, Band-Aids and sharps containers. Please see attached *CDC Product Information Guide for COVID-19 Vaccines and Associated Supplies*.

Storage and Handling

Division of
Immunization

Indiana Department of Health
Immunizations Division
COVID-19 Vaccine Storage Temperature Requirements

Temperature Monitoring Guidelines:

1. Check and record the min/max temperatures of the storage units each day using a temperature monitoring device.
2. If your temperature monitoring device does not automatically record min/max temperatures, record the temperature at the start and end of each workday.

Pfizer-BioNTech COVID-19 Vaccine Storage Temperature Requirements

Frozen Storage

- Vials stored at -25°C to -15°C (-13°F to 5°F) for up to 2 weeks may be returned one time to the recommended storage condition of -80°C to -60°C (-112°F to -76°F).
- Total cumulative time the vials are stored at -25°C to -15°C (-13°F to 5°F) should be tracked and should not exceed 2 weeks.

Ultra-Cold Storage

- Store as frozen liquid at -80°C to -60°C for up to 6 months.
- Storage of the vials between -96°C to -60°C (-141°F to -76°F) is not considered an excursion from the recommended storage condition.

Refrigerator Storage

- Can be stored at 2°C to 8°C (35°F to 46°F) up to 5 days.
- Room temperature hold time is no more than 2 hours.
- Thaw from frozen for 3 hours at 2°C to 8°C (35°F to 46°F) or 30 minutes at room temperature for immediate use.
- Post dilution in use period is 6 hours.

Room Temperature Storage

- No more than 2 hours

Thawing Options

Option 1

- Transfer frozen vials immediately to refrigerator, and thaw for 3 hours at 2°C to 8°C (35°F to 46°F).
- Vials may be stored in refrigerator for up to 5 days or 120 hours before dilution.

Option 2

- Thaw at room temperature for 30 minutes if using immediately.
- Vials may be held at room temperature for no more than 2 hours prior to dilution.

DO NOT REFREEZE THAWED VIALS

Wastage

It is expected that there will be times when doses from a vial are wasted in order to vaccinate a few individuals. Wastage should be avoided if possible, but please administer to anyone who wants the vaccine. We encourage you to take every opportunity to vaccinate, even if the rest of the vial may not be used. In the case of vaccine wastage, you will need to fill out the [vaccine wastage form](#).

Communications

The Indiana Department of Health has created a [provider toolkit](#) to help you communicate with patients regarding COVID-19 vaccination.

The toolkit includes:

- Vaccine posters for waiting areas and exam rooms (English/Spanish)
- After Vaccination Palm Cards with post-vaccination information on all three vaccine types in English/Spanish
- Vaccine hesitancy information: Includes sample communication, tips and other resources
- How to talk to patients
- Youth fact sheet for families with children ages 12-15
- Vaccine effectiveness in Indiana one-sheeter for patients

Adverse Reactions

In the case of an adverse reaction, vaccine recipients and healthcare providers are encouraged to report vaccine reactions to the Vaccine Adverse Event Reporting System (VAERS). VAERS accepts and analyzes reports of adverse events (possible side effects) after a person has received a vaccination. Anyone can report an adverse event to VAERS. Healthcare professionals are required to report certain adverse events and vaccine manufacturers are required to report all adverse events that come to their attention.

Providers can also encourage vaccine recipients to sign up for V-safe, a smartphone-based tool that uses text messaging and web surveys to provide personalized health check-ins after someone receives a COVID-19 vaccination. Through v-safe, vaccine recipients can quickly tell CDC if they have any side effects after getting the COVID-19 vaccine. Depending on their responses, CDC may follow up with them by phone to get more information. V-safe will also remind them to

get their second COVID-19 vaccine dose, if needed. CDC is requesting that healthcare providers give patients a V-safe information sheet at the time of vaccination and encourage them to enroll and fill out the surveys when prompted to do so. Vaccinated individuals should register online at <https://vsafe.cdc.gov/>.

Next Steps

In the future, IDOH plans to move the majority of distribution and ordering vaccines to Langham Logistics. This will ensure that the process is sustainable and as efficient as possible. This process is still under development – IDOH will provide further information as the situation develops.

For additional information, including clinical resources, please visit <https://www.cdc.gov/vaccines/covid-19/info-by-product/index.html>

COVID-19 Vaccine

Product Information Guide

» Purpose:

This guide provides specifications for COVID-19 vaccine and associated products. **This is NOT a catalog from which you can order products.** It provides key product information including product package dimensions and weight, minimum order quantities, product presentation, distribution method, storage information, and additional information. This guide will be updated as more products become available.

» How to use this guide

Jurisdictional immunization program staff—use this guide to help you:

- Learn about available COVID-19 vaccines and associated products.
- Provide answers to questions from COVID-19 vaccination providers.

COVID-19 vaccination providers—use this guide to help you:

- Learn about available COVID-19 vaccines and associated products.
- Prepare storage space to ensure ordered quantities can be stored at the proper temperature.
- Prepare staff responsible for receipt and storage of vaccine deliveries.

Refer to CDC's [Vaccine Storage and Handling Toolkit](#) for recommendations and best practices on related topics such as vaccine inventory management.

» Addendum:

The [COVID-19 Vaccine Ancillary Supply Kit Guidance](#) in the addendum (page 15) provides more specific information on the ancillary supply kits.

Additional COVID-19 vaccines may be authorized or licensed in the future. This guide will be updated as more products become available.

» Centrally Distributed Ancillary Supply Kit Volume

Vaccination provider sites will need to prepare space to store vaccine and ancillary kits. Large volume orders of vaccine can be compactly packaged, however, ancillary supply kits to support these orders will require much more storage space. For each 100 doses of vaccine, an ancillary kit measuring 14 in x 13 in x 9 in and weighing 3.5 pounds will be provided. The below picture demonstrates the number and volume of ancillary kits compared to vaccine in a large volume order of 4,000 doses.

Centrally Distributed Vaccines and Ancillary Kits

1 Extra-large vaccine cooler

40 ancillary kits

COVID-19 Vaccine

Product Information Guide

» Direct-Ship Vaccine and Ancillary Kit

Pfizer-BioNTech COVID-19 Vaccine (Direct Ship)

Manufacturer	Pfizer
NDC # in VTrckS	59267-1000-02
Tray dimensions	229 mm x 229 mm x 40 mm (approximately 9 in x 9 in x 1.5 in)
Minimum order size and increment	1,170 doses
Presentation	6-dose multidose vial/195 MDV per tray
Items automatically added to your VTrckS order when you select this vaccine	Large combined ancillary supply kit for administration and mixing (includes 0.9% preservative-free normal saline diluent).
Age indications	16 years of age and older
Vaccination schedule	2-dose series separated by at least 21 days
On-site vaccine storage	<ul style="list-style-type: none"> ■ Unpunctured Vials: <ul style="list-style-type: none"> • -80°C to -60°C (-112°F to -76°F) in ultracold storage unit until the expiration date • -80°C to -60°C (-112°F to -76°F) in the original thermal shipping container with dry ice recharges. Please allow for forthcoming information on the maximum time for storage in these conditions. • -25°C and -15°C (-13°F to 5°F) in a freezer for up to 2 weeks (14 days) • 2° C to 8°C (36° F to 46°F) in a refrigerated storage unit for up to 5 days (120 hours) ■ Punctured (mixed) vials: <ul style="list-style-type: none"> • 2°C to 25°C (35°F to 77°F) and use within 6 hours from the time the vaccine was mixed with the diluent
Additional information	<ul style="list-style-type: none"> ■ Vaccine will be shipped in a container that includes dry ice. Thermal shipping container dimensions are 400 mm x 400 mm x 560 mm (approximately 15 ¾ in x 15 ¾ in x 22 in). ■ A thermal shipping container holds up to 5 cartons/trays. ■ CDC recommends providers consider using the thermal shipping container for temporary storage only. The container requires significant support to store vaccine at proper temperatures, including trained staff, a regular supply of dry ice, and standard operating procedures for regular maintenance. ■ If using the thermal shipping container to store vaccine, add dry ice pellets (9 mm to 16 mm) within 24 hours of delivery and every 5 days or as needed to maintain temperatures. ■ Unless a provider opts out, dry ice will be delivered within 24 hours of vaccine delivery to refill the thermal shipping container for the first re-ice only. Additional dry ice will not be provided. Locate a dry ice source if planning to use the shipping container to store vaccine for more than 5 days. ■ Do not use or store dry ice or liquid nitrogen (LN2) in confined areas, walk-in refrigerators, environmental chambers or rooms without ventilation. A leak in such an area could cause an oxygen-deficient atmosphere. ■ A full shipping container with vaccine and dry ice weighs approximately 80 pounds.

Kit description	Combined kit with small syringes for vaccine administration (with a 4:2 ratio of low dead-volume needles/syringes to non-low dead-volume needles/syringes), mixing supplies, and diluent.		
NDC # in VTrckS	11111-0010-02 (Adult)*		
Kit dimensions/weight	Kit box may be one of the following sizes: <ul style="list-style-type: none"> ■ 24 in x 18 in x 20 in / 45 – 46 lbs ■ 24 in x 20 in x 18 in / 45 – 46 lbs ■ 24 in x 20 in x 20 in / 45 – 46 lbs ■ 24 in x 20 in x 22 in / 45 – 46 lbs 		
Minimum order size and increment	Kit to support administration of 1,170 doses (plus overage), including 0.9% preservative-free normal saline diluent		
Accompanies 0.3mL-dose vaccines	Pfizer-BioNTech		
Order Intention	Initially only adult kits will be available, when authorized for use in younger populations, pediatric and mixed (pediatric and adult) will be available for order.		
Contents: Each kit contains a label on the outside of the box with a complete inventory list.	Adult Kit <ul style="list-style-type: none"> ■ 830 needles (22-25G X 1") ■ 830 syringes (1 mL, LDV) ■ 185 needles (22-25G X 1") ■ 185 syringes (1 mL) ■ 225 needles (22G-25G X 1.5") ■ 225 syringes (1 mL) ■ 205 mixing needles (22-25G X 1.5") ■ 205 mixing syringes (3 mL or 5 mL) ■ 2,900 alcohol pads ■ 1,200 vaccination record cards ■ 10 needle gauge and length charts ■ 25 face shields ■ 50 surgical masks ■ 200 Diluent vials* 	Pediatric Kit <ul style="list-style-type: none"> ■ Kit contents currently unavailable 	Mixed Kit (Pediatric/Adult) <ul style="list-style-type: none"> ■ Kit contents currently unavailable

* For a short period of time, two kits supporting 1,170 doses will be in circulation. The original kit (NDC# 11111-0008-02) will be discontinued in favor of a new kit with a 4:2 ratio of low dead-volume needles/syringes to non-low dead-volume needles/syringes (NDC# 11111-0010-02).

» Large Combined Ancillary Supply Kit for Administration and Mixing (Direct Ship)

Additional information

- Products and brands for kit components may vary.
- All needles for vaccine administration are safety needles.
- Kits will include a mixture of low dead-volume and non low dead-volume needles/syringes.
- Needles for mixing diluent with vaccine are conventional needles.
- Due to the limited supply of needles and syringes, specification of preferences for needles or syringes is not feasible.
- Kit and pallet configuration
 - 1 kit = 1,170 vaccinations (plus overage)
 - 1 pallet = 8 kits (supports 9,360 vaccinations, plus overage)

Contents and Quantities for Mega Kits to Support Pfizer-BioNTech Vaccine

December 11, 2020

This is a clarification about the needle and syringes included in the COVID-19 ancillary supply kits for administering Pfizer's ultra-frozen vaccine. Based on questions coming into our call centers supporting the distribution of the ancillary supply kits, there is some confusion about the quantities of needles and syringes included in the kits. Each kit is clearly labeled with a complete inventory list. (See example below.)

Procuring the sheer number of needles and syringes needed to support an operation of this size involves complex logistics, which is why vaccine administrators may see variance in how the supplies are packaged. The listed products may be received as a combo, defined as a single packaged needle and syringe, or as individual components. The quantities listed on the label represent the minimum number of total combinations in each kit.

- For example, if the kit above was shipped with (830) 1mL-25Gx1" syringe/needle combos, (185) 25Gx1" needles, and (225) 25Gx1.5" needles for administration, the kit would only contain (410) 1mL syringes to accompany the (185) 25Gx1" needles and (225) 25Gx1.5" needles. This would yield a total of (1,240) needles with accompanying syringes (some packaged together, some individually).

Please note there will be multiple configurations used as products continue to be procured to support the assembly of these and other ancillary supply kits. Regardless of configuration, the kit contents will meet the minimum quantities listed on the kit content labels and will support the same total number of doses.

We hope this communication helps your teams as they review the content in the kits to ensure their readiness for administration when you receive the vaccine doses.

Please direct any issues regarding the ancillary kits to support the Pfizer COVID-19 vaccine to McKesson Customer Service at:

COVID-19 Vaccine

Product Information Guide

» Addendum: COVID-19 Vaccine Ancillary Supply Kit Guidance

» COVID-19 Vaccine Ancillary Supply Kit Guidance

Purpose:

This guidance provides an overview of the COVID-19 vaccine ancillary supply kits the U.S. Department of Health and Human Services (HHS) is providing to enrolled COVID-19 vaccination providers as part of the federal COVID-19 Vaccination Program. It includes a general description of different COVID-19 vaccine ancillary kit configurations for administration, as well as a list of select corresponding products, product descriptions, and product quantities. For reference and to access additional product-specific information and training resources, this document also includes website hyperlinks and contact information for select product manufacturers.

Background:

HHS is providing ancillary supply kits for the administration of COVID-19 vaccine. The Strategic National Stockpile (SNS), managed by the HHS Office of the Assistant Secretary for Preparedness and Response (ASPR), is partnering with McKesson Corporation to produce, store, and distribute these vaccine ancillary supply kits on behalf of the SNS.

How to use this guide:

Jurisdictional immunization program staff—use this guide to help you:

- Learn about products that will arrive in ancillary kit(s).

COVID-19 vaccination providers—use this guide to help you:

- Learn about products that will arrive in ancillary kit(s).
- Prepare storage space for the ancillary kit products you will receive.

Ancillary kit basics:

How does a provider order ancillary kits?

You do not need to order ancillary kits. When you order COVID-19 vaccine in VTrckS, ancillary supplies will automatically be ordered in amounts to match the vaccine orders.

Note: To receive COVID-19 vaccine, vaccination provider facilities and organizations must enroll in the federal COVID-19 Vaccination Program coordinated through their jurisdiction's immunization program.

How much do ancillary kits cost?

Ancillary kits will be provided at no cost to enrolled COVID-19 vaccination providers.

What products are in ancillary kits?

Ancillary kits contain supplies (with some overage) to administer:

- 100 doses of vaccine (Moderna and Janssen)
- 140 doses of vaccine (Moderna)
- 1,170 doses of vaccine (Pfizer-BioNTech)

Refer to page 18 for possible variations on kits contents.

How will needles and syringes be packaged?

Needles and syringes for vaccine administration may be packaged as integrated units (i.e., combo needles and syringes for which NO assembly required) or as separate items in a kit (i.e., assembly required).

Can I order specific brand(s) of needles and/or syringes?

Due to a limited supply of needles and syringes, specification of preferences for needles or syringes is not feasible. Products included in the kits may vary over time. In order to meet the demand for supplies, the federal government has purchased single-use, sterile needles and syringes from multiple manufacturers (to include foreign sources) to ensure adequate supplies. These products are approved by the U.S. Food and Drug Administration, safety-engineered and compliant with standards established by the Occupational Safety and Health Administration.

What is considered “pediatric” and “adult”?

For the purpose of immunizations pediatric is birth through 18 years and adult is 19 years and older. Refer to each product's EUA for age indications.

SAFETY NEEDLES

25/23 Gauges (Variety of Lengths)

- Boxes of 50, sterile needles are sealed in individual packages for assurance and convenience
- Compatible with all major brands of luer lock syringes
- Lubricated needle provides smooth injection

- Easy, three-way safety wing activation: forefinger, thumb or hard surface
- Needles are UV bonded to ensure stability
- Easy to read tri-lingual packaging

Item Number	Product Description	UPC	Box Quantity	Case Quantity
32-8700	25G x 5/8" (.625)	786227081005	50 ct.	16/bxs

Easy•Touch®
FlipLock™ Safety Syringes

SIMPLE & SMART

EasyTouch FlipLock Safety Syringes offer an easy and simple solution in caregiver protection. After injection, just flip the protective shield over the needle until it clicks and locks in place. Hands and fingers stay away from the exposed needle. Simple, smart and cost-effective.

- ✓ Easy to Use
- ✓ Protective Cover Shields Needle After Use
- ✓ Familiar Technology Requires Limited Training
- ✓ Multi-lock Safety System
- ✓ Contains No Natural Rubber Latex

- ✓ Heavy-Duty Barrel
- ✓ Disposable
- ✓ Sterile, Individually wrapped
- ✓ Needle Attaches to Any Luer Lock Barrel
- ✓ Safety Engineered

The Sterile Disposable Syringe with Safety Needle is intended for use in the aspiration and injection of fluids for medical purpose.

Ask your healthcare professional for assistance in choosing the needle length, injection site and technique appropriate for you.

The needle fits any standard luer lock or luer slip syringe and it is equipped with a safety cover, that prevents needle stick self-injury after use.

INSTRUCTIONS FOR USE

Follow your recommended clinical procedures for drug injections. See the patient information leaflet of the drug.

Peel blister pack of the DropSafe Syringe with Safety Needle. Use aseptic technique.

Ensure needle is firmly attached to the luer lock or luer slip syringe.

Pull back the safety cover to enable a clear view of the injection site then remove the needle cap.

Draw up the medication according to its reference information. Prime the needle, if required.

Administer injection according to established protocol.

Do not recap needle with needle cap. Immediately after injection, activate the safety cover by pressing down on a flat surface until you feel or hear an audible click, indicating the cover is securely locked over the needle.

Once the cover is securely locked over the needle, dispose of syringe and needle in an approved sharps container.

VANISHpoint® Syringe

Standard Draw Procedure

In-Patient, Automated Retraction

Non-Reusable

Product Usage Information:

1. Prepare and give injection using aseptic technique according to institutional policy.
2. For injection into patients, continue depressing plunger to activate automatic needle retraction **while needle is still in patient**. For injection into IV ports, continue depressing plunger to activate automatic needle retraction and **immediately remove needle from port**. **Full dose is administered only when needle retraction is activated.**
3. Needle will automatically retract into syringe, preventing exposure to contaminated needle and rendering syringe non-reusable. In the event that needle retraction mechanism does not activate, discard syringe in an appropriate sharps container per protocol of institution. Do not recap contaminated needles.
4. Dispose of VanishPoint® syringe in an appropriate sharps container per protocol of institution.

Precautions:

- Single use only. Reuse of this device may result in exposure to bloodborne pathogens, including Hepatitis B virus (HBV), Hepatitis C virus (HCV), and human immunodeficiency virus (HIV).
- Contents are sterile, non-toxic, and non-pyrogenic. Do not use if product or package is damaged.
- Not made with natural rubber latex.
- Use only with attached needle. Needle cannot be changed.
- Automated needle retraction occurs only when barrel is emptied and plunger is fully depressed.
- For applications where full dose is not administered, expel remaining contents according to institutional policy and activate needle retraction.
- U.S. Federal Law restricts this device to sale by or on the order of a physician.

Product Information Guide

» Smiths Medical Needle-Pro® and Needle-Pro® Edge™ Safety Devices

Needle-Pro® and Needle-Pro® Edge™ Safety Devices

Identification and Connection Guide

Smiths Medical offers the Needle-Pro® and Needle-Pro® Edge™ hypodermic safety devices. It is important to identify which device you are using and review the Instructions for Use prior to using. The information below is to assist you in identifying which device you are using and to help ensure the connections are tightened and secure prior to use.

Needle-Pro® Hypodermic Safety Device

Two points of connection

- Needle to Needle-Pro® orange safety device (1)
- Needle-Pro® orange safety device to syringe (2)

Ensure the 2 connections are secure by:

1. Twisting to tighten the needle into the Needle-Pro® orange safety device AND
2. Twisting to tighten the Needle-Pro® orange safety device into the syringe

Needle-Pro® EDGE™ Hypodermic Safety Device

One connection

- Needle-Pro® Edge™ safety device to syringe (1)

Ensure the connection is secure by:

1. Twisting to tighten the connection between the Needle-Pro® Edge™ and syringe prior to use

Scan the QR Code for a short video describing the connections.

» Pfizer-BioNTech COVID-19 Vaccine and Low Dead-Volume (LDV) Syringes and/or Needles

Pfizer-BioNTech COVID-19 Vaccine and LOW DEAD-VOLUME (LDV) SYRINGES AND/OR NEEDLES

The Pfizer-BioNTech COVID-19 Vaccine has not been approved or licensed by FDA, but has been authorized for emergency use under an Emergency Use Authorization to prevent Coronavirus Disease 2019 (COVID-19) for use in individuals 16 years of age and older. The emergency use of this product is only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of the medical product under Section 564(b)(1) of the FD&C Act unless the declaration is terminated or authorization revoked sooner.

Please see Emergency Use Authorization (EUA) Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers) including Full EUA Prescribing Information available at www.cvdvaccine-us.com.

After dilution, vials of Pfizer-BioNTech COVID-19 Vaccine contain 6 doses of 0.3 mL of vaccine. Low dead-volume syringes and/or needles can be used to extract 6 doses from a single vial.

Use of low dead-volume (LDV) syringes and/or needles may maximize the potential number of vaccine doses and minimize vaccine wastage¹

i Low dead-volume (also called low dead-space) is the amount of fluid remaining within the syringe and needle after an injection is completed²

Characteristics of LDV syringes and needles

 <p>HIGH dead-volume needle and syringe</p>	 <p>REDUCED dead-volume modified syringe</p>	 <p>LOW dead-volume detachable needle</p>	 <p>LOW dead-volume fixed "all-in- one" needle and syringe</p>
<p>Withdrawal of 6 doses is unlikely with standard detachable needles with standard syringe</p>	<p>LDV SYRINGES have plungers molded to the luer cone, allowing fluid to be cleared from the syringe tip during injection</p>	<p>LDV NEEDLES have an extension of the needle that fits through the opening of some standard syringes, allowing for a reduction in dead space</p>	<p>FIXED-NEEDLE SYRINGES have low dead volumes and will, in most cases, achieve 6 doses of the Pfizer-BioNTech COVID-19 Vaccine</p>

Compatible LDV syringe and/or needle pairings may successfully withdraw 6 doses of Pfizer-BioNTech COVID-19 Vaccine, but not all combinations have been assessed or have a low dead volume that is small enough to allow extraction of a sixth dose.

The Centers for Disease Control and Prevention (CDC) is partnering with McKesson to provide ancillary kits containing needles and syringes for use with all COVID-19 vaccines. Please reach out to your state, local, or tribal health department and/or the CDC for more information. Pfizer makes no guarantee of the type or quality of the needles and syringes within the ancillary kits or the capability to withdraw 6 doses. For further information, please contact the manufacturer directly.
